Compute resources

Two environments -

- Primary development environment for the course project
- Fast setup, interactive, and well-suited for iteration
- Expected to cover most of your project work

- High-performance environment for compute-intensive workloads
- Intended for later stages of the project
- Use only when Colab Pro is insufficient

Budget policy: experiment early, spend late

- Total compute budget per team: $300 in runpod + Colab Pro access
- Budget is released in stages to support planning and prevent accidental overspending.

- $9.99 per month per person
- Free if first-year Colab Pro trial is unused in Andrew email

* as necessary

- For the group. Can be divided into 2 accounts.
- $300 USD in total (hard limit)

Runpod Compute with Timeline

T 2/10 Pitch presentations

R 2/19 Project proposal presentations

R 3/12 Project update presentations

R 3/26 Project update presentations

R 4/07 Project update presentations

T 4/21 Final project presentations

$30 for tutorial and EDA

$270 for major runs

Runpod request policy

$270 for major runs

- Runpod is intended for **large or final experiments only**
- Maximum request at one time: **$110**
- Maximum number of requests per team: **3**
- Budget may be split across **up to two accounts per team**

Process:

- Submit requests using the provided link in canvas
- After approval, **meet with Prof. Sang to** complete payment setup
- Plan your Runpod usage like an experiment—not a debugging session.

Request Submission Spreadsheet

Group	Name	Email	Colab			Runpod Request # 1
